Quality . . .

The quality of painted exterior building products relies heavily on the applied finish. The finish on our entire New Style Soffit system is a roll coated polyester that is baked on at high temperatures for durability. The unexposed side also receives a roll coated and baked on polyester to help resist corrosion. Careful attention is maintained from surface preparation to paint thickness and hardness to optimize performance.

Value . . .

The “mix and match” capabilities of our New Style Soffit systems allow you to customize the look and function of your installation while saving time and money. All of this with a lifetime limited warranty that says it is as good as it looks.

16" Quad Vented

12" Double Six Vented

12" Triple Solid

Versatility . . .

A versatile selection of the industries most popular colors means our New Style Soffits will match or coordinate with most of today's home coverings and rainware products.

Proper ventilation is essential to reduce heat and avoid damaging moisture than can build in attic areas. To achieve the air flow needed, solid panels and ventilated panels can be combined, and since the 12" triple four and 16" quad four panels are identical in profile, they can be used jointly, or mixed as needed. The 16" panel offers speed of installation while the 12" panel performs well on larger overhangs, such as porches, where additional nailing support may be desired.
